AND HOW TO HANDLE IT: A 14-PAGE SPECIAL REPORT

# Moore's Law...

*...a hardware issue just became a software problem*

“The era of single processor systems is over; the multi- and many-core systems world is here. If you're not ready for this change, there's an IT train wreck in your future.”

# Windows HPC Server 2008 R2

Complete. Integrated. Forward Looking.

- MPI
- Long running batch
- Low latency interactive
- Parametric Sweep
- Embarrassingly Parallel
- Business Critical SOA
- Excel and ISV apps
- Job Scheduling Policies

- Integrated IDE
- MPI Debugger
- MPI Profiler
- SOA debugger
- Task Parallel Library, PLINQ
- Integrated GPU support

- Deployment
- Configuration
- Monitoring
- Diagnostics
- Trouble Shooting
- Diskless & Dual-boot
- Reporting
- Performance Tuning

- Private clouds
- Public clouds
- HPC as a service
- Big Data Analytics
- Visualization
- Integrated Workflow

# Windows HPC Server 2008 R2 Suite

Excel      Cluster SOA      HPC Applications      MPI      ISV / OSS Applications

Job Scheduling      Systems Management      HPC Middleware Pack      Networking & MPI      SOA

HPC Edition  
Windows Server 2008 R2  
Web | Virtualization | Management | Better Together with Windows 7

Operating Systems

Windows 7

Intel Xeon 5500      AMD Opteron 64      Clusters of Commodity Hardware      Performance Accelerated InfiniBand Adapters      NVIDIA TESLA

# Windows HPC Server 2008 R2 - Benefits

## Systems Administrators

Simplified, easy administration due to comprehensive, integrated management tools

Rapid deployment to very large clusters

Reuse of existing Windows Server administration skills

## Application Users

Reduced learning curve due to familiar Windows environment

Single Sign-On, Remote Access, Workflow, due to easy integration with existing infrastructure

Access to hundreds of optimized packaged applications

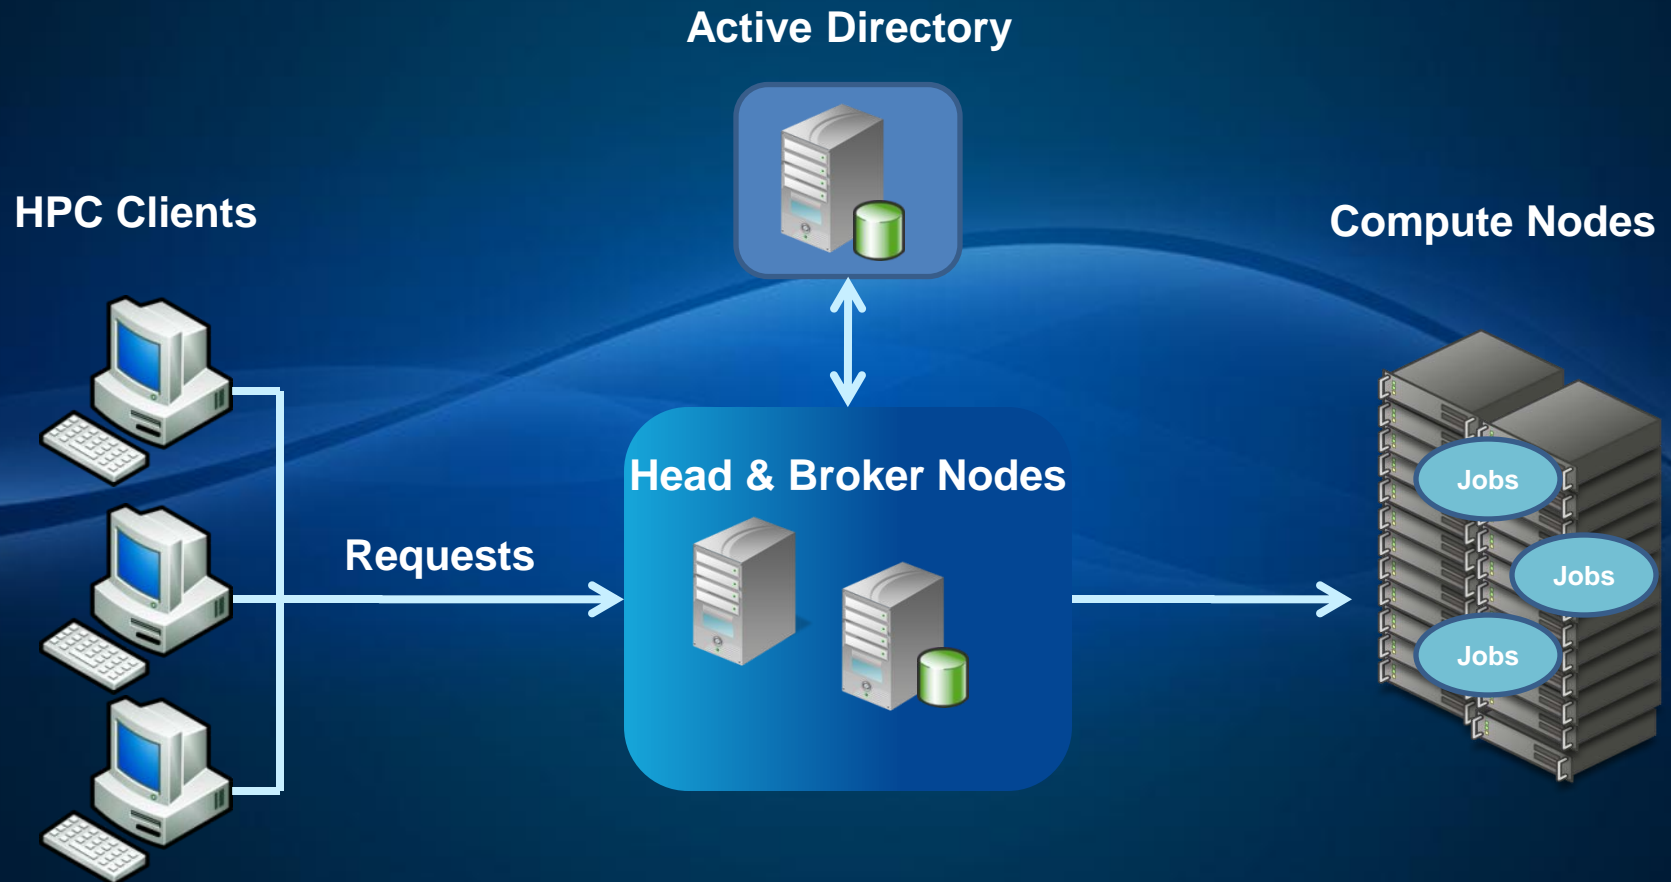

## Application Developers

Fast development of robust HPC cluster applications with dedicated cluster tools

Increase productivity with integrated set of parallel and cluster development tools

Reuse of existing development skills due to parallelism support in .NET 4.0

# Basic HPC Cluster Topology

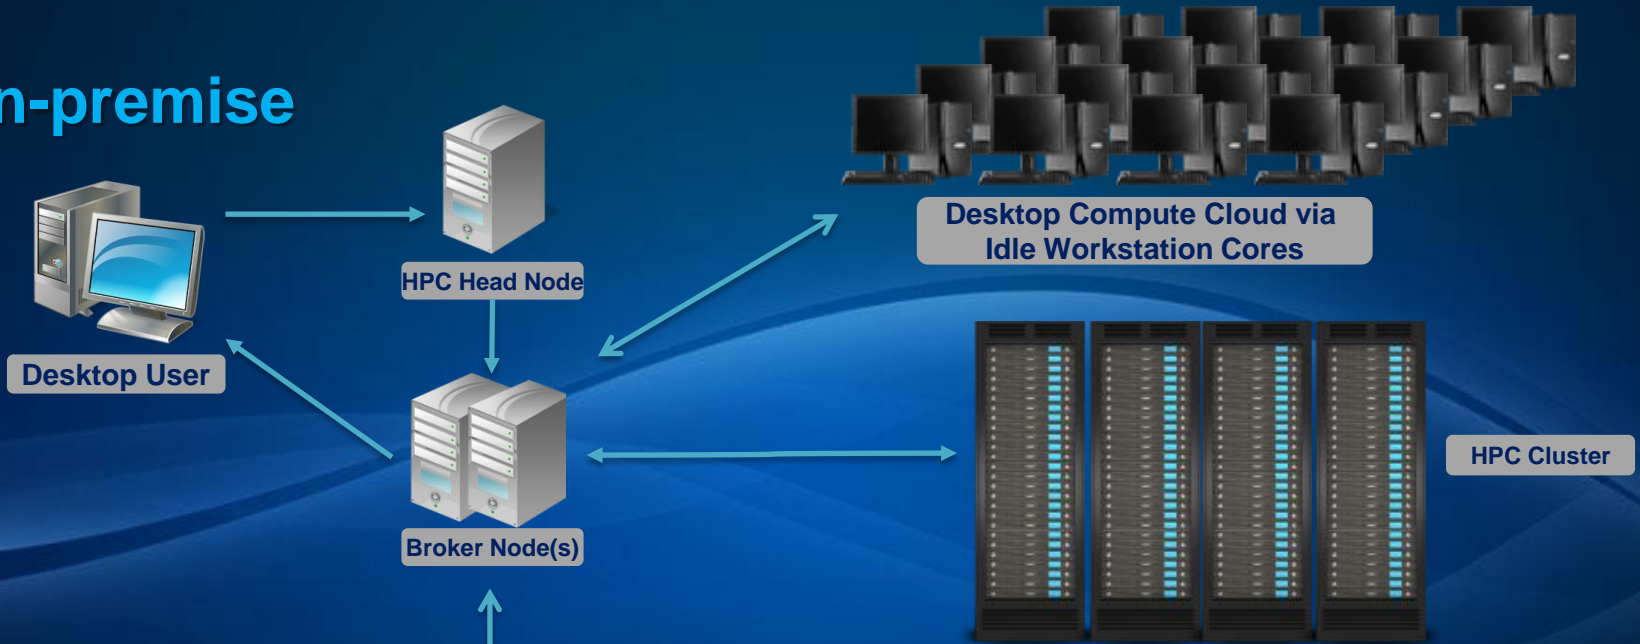

## Cloud

multiple node  
distributed memory  
on demand capacity

# Windows HPC and Cloud

## On-premise

## Azure

# Benefits of Technical Computing For Simulation and Engineering

## Calculation Bottlenecks:

Geometric simplifications  
and reduced physics to  
keep model sizes small

Long calculation  
turnaround, inability to get  
results in time to affect  
business decisions

Single-point simulations,  
inability to consider  
parametric studies or  
design optimization

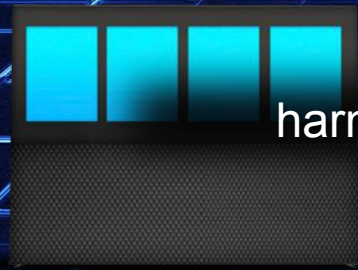

## HPC Provides:

More detailed computations  
with high fidelity between  
analysis and reality  
(Memory – RAM)

Faster turnaround  
time, ability to affect  
technical computing process  
(Processors)

Ability to consider multiple  
design options for  
comprehensive insight  
(Capacity)

harnessing parallelism across client, cluster & cloud

Client

single node  
shared  
memory

Cluster

multiple nodes  
distributed memory

Cloud

multiple node  
distributed memory  
on demand capacity
